

Yantacaw 6th Grade

Mrs. Licameli, Mrs. Masullo, and Mrs. McKenzie

Science

The science classes are studying plant and animal cells. The students are identifying the cell parts and their functions. We will learn that cells have different shapes and their shape helps them to do their job.

We complete a study guide together as we work through each chapter. All tests are based on this study guide and are announced several days in advance. Parents could check agendas for test dates and review the information on the study guide with their child.

Grammar and Health

Throughout the year Mrs. McKenzie will cycle between grammar and health. In grammar we are working on sentences; simple, compound and complex. We will move on to plural nouns, proper nouns, capitalization, and possessives. Homework sheets will be given several times a week.

In health, the class will begin learning about germs and diseases in late October.

Language Arts

New spelling words are introduced on Thursday and all tests are on Wednesdays.

Social Studies

The social studies classes are beginning chapter 2 "Learning About Early People" We will discuss how early people lived and the beginning of culture. The first study guide is due the day of the chapter test which will be announced ahead of time. Please check assignment pads for dates.
